

$$\frac{-b}{2a} = 1/3 \quad b = -2a/3$$

$F(r) = -7/6$  buradan

$$c = a/9 - 7/6$$

$a + b + c \in \mathbb{Z}$  olduğundan

$$a - 2a/3 + a/9 - 7/6 = \frac{8a - 21}{18} \in \mathbb{Z} \text{ ise } \min(8a) = 3 \text{ ise } a = 3/8$$

$$m/n = 3/8 \text{ ve } n - m = 5$$
